His Corduroy Pants Mayor Gaynor was talking to a Nev York reporter about the famous rob bery case wherein a criminal had been convicted by means of the Bertillon system of finger prints alone.

"It reminds me," said the mayor," of a story about a parson. This parson had a fine orchard, and one summer, just when the Bertillon system first came out, the orchard was robbed. The Santa Ana Schools

Editor Register: If we are to judge the temper of the people of this city as it has been manifested during the past twenty-five years, it is plain that we are ready to provide the money necessary for the maintenance of the schools and the building of school houses as they are needed-but when the money has been provided we have a right to expect that those who spend the money will pay some regard to the architectural proportions of the school buildings and have a de cent regard for their surroundings.

Some years ago there was built on Main street a high school building and its beauties and fine proportions have been a source of pride as we show it to the stranger and our numerous visitors.

A few years ago we were told that more room was needs and the people provided the many and had a right to expect that the school board would pay due regard to the architectural proportions of the original structure and to the church building next north of the proposed new building, but instead we find a box structure with "sawed off" appearance and, in no particular, of suitable proportions as a companion building of the older structure, we are not proud of it.

First, let the school board tell us what kind of buildings they propose o construct and then ask for permission to build, and if the people discover that there is brains behind the project, there will be no need of cailing a second time for the money.
